# 1 Overview

The BHyCLI command-line interface tool is an application based on the Bosch BHy SensorAPI and COINES SDK (Communication with Inertial and Environmental Sensors) application board framework. It can be used to quickly test and evaluate the BHIxyz shuttle board with the application board.

The core functionalities of the BHyCLI include:

- Programming the BHy customer shuttles
- Accessing registers
- Accessing System/Driver Specific Parameters
- Data Acquisition
- Sensor Configuration
- Accessing System/Application Status Information
- Application Configuration
- Data Injection
- Diagnostics

Figure 1: Overview

This user guide introduces the BHyCLI commands with examples to demonstrate the use of these commands to operate the BHy Smart Sensor.

## 1.1 Compatibility

Table 1 describes the compatibility of BHyCLI with other dependencies.

Item	BHyCLI	FW	BSX4	BHy SensorAPI	COINES SDK	Supported Boards	Supported Sensors
Version	0.5.1	1.1.18	IR84.3	2.0.0	2.10	APP30 APP31 Nicla Sense	BHIxyz

Table 1: BHyCLI Compatibility Matrix

**Note:** BHyCLI is not tested with Nicla Sense board

## 2 Setup

Before using the BHyCLI, it is necessary to understand the system design and set up the embedded environment accordingly.

**Note:** This Application Note is referenced with COINES SDKv2.10.2 and BHy SensorAPIv2.0.0.

### 2.1 COINES SDK Environment

As mentioned earlier, BHyCLI is based on the COINES SDK Framework. As such, the COINES SDK environment must be set up prior to using the BHyCLI application, since COINES installation also installs USB drivers which is necessary for MCU testing of BHyCLI.

1. Install COINES SDK at [COINES SDK | Bosch Sensortec \(bosch-sensortec.com\)](https://www.bosch-sensortec.com)
2. For further instructions, refer to Chapter 4, "Installation" in the [COINES SDK User Manual](#).
3. Install USB drivers to execute BHyCLI application

## 2.2 Application board setup

Figure 2: HW Setup

The BHyCLI can be used with an Application Board or the Nicla Sense boards to evaluate the BHy Sensor Hubs (BHIxyz).

The Application Board refers to the Bosch Sensortec [Application Board 3.0 | Bosch Sensortec \(bosch-sensortec.com\)](https://www.bosch-sensortec.com) and [Application Board 3.1 | Bosch Sensortec \(bosch-sensortec.com\)](https://www.bosch-sensortec.com).

The Nicla Sense board is a compact (wearable form-factor), low-power, and robust development board that enables users to develop smart sensing applications and is suitable for rapid prototyping and deployment. Refer to [Arduino Nicla Sense ME | Bosch Sensortec \(bosch-sensortec.com\)](https://www.bosch-sensortec.com) for further details.

**Note:** BHyCLI is not tested with the Nicla Sense board.

Table 2 shows the BHyCLI application can be run in two operation modes.

Table 2: Modes of Operation

Mode	Description
MCU	The application runs on the Application Board and interacts directly with the Sensor Hub.
PC	The application runs on a PC and interacts with the Sensor Hub via a base application running on the Application Board.

**Note:** The following instructions for the board setup are referenced for the application board.

Below is the release package of BHyCLI, which is received with BHyCLI v0.5.1, when unzipped, holds BHI3-firmware (BHIxyz firmware), MCU (BHyCLI binaries and MTP tools), PC (BHyCLI executables), firmware (COINES firmware – bootloader, coines\_bridge, bootloader) and tools (app\_switch and usb-dfu – required to transfer firmware files to External FLASH)

Figure 3: BHyCLI release package

### 2.2.1 Running BHyCLI in MCU mode

In MCU mode, the BHyCLI application runs in the application board and communicates directly with the BHy Sensor Hub.

Figure 4: MCU Mode

#### Execute BHyCLI in MCU Mode:

1. From release package (Refer Figure 3 above), open the folder for the Application board connected (**<board>**: app30 or app31)
2. For **app30**,
  - a. In `<release>/firmware/app30`,
    - i. Flash, `coins_bridge/ update_coins_bridge_flash_fw.bat`
    - ii. Flash, `bootloader_update/ update_bootloader.bat`
    - iii. Flash, `mtp_fw_update/ update_mtp_fw.bat`
  - b. In `<release>/MCU/app30`,
    - i. Execute `app30_format_flash.bat` (Formats FLASH)
    - ii. Reset board.
    - iii. Execute `app30_bhi360_mcu_mode.bat` (Uploads BHI360 firmwares to External FLASH)
3. For **app31**,
  - a. In `<release>/firmware/app31`,
    - i. Flash, `coins_bridge/ update_coins_bridge_flash_fw.bat`
    - ii. Flash, `bootloader_update/ update_bootloader.bat`
    - iii. Flash, `mtp_fw_update/ update_mtp_fw.bat`
  - b. In `<release>/MCU/app31`,
    - i. Execute `app31_format_flash.bat` (Formats FLASH)
    - ii. Reset board.
    - iii. Execute `app31_bhi360_mcu_mode.bat` (Uploads BHI360 firmwares to External FLASH)
4. Reset board.
5. BHyCLI application is ready to communicate (Refer Table below for Platform/Application reference)

**Note:** When executing `<board>_format_flash.bat`, there is a prompt message to confirm if format can be performed. Entering 'y' performs format of External FLASH.

**Note:** By default, the SPI Interface of BHyCLI is present. To change to the I2C interface, update to `i2c_bhycli.bin` in `<board>_bhxyz_mcu_mode.bat`

**Note:** The BHyCLI application can be booted from RAM or an external Flash on the application board. However, as the size of the BHyCLI application is large, it is recommended that the BHyCLI application be downloaded and booted from the Flash of the application board.

- The following host applications can be used to communicate with the BHyCLI application.
- For communication over serial interface –

Platform	Terminal Application
----------	----------------------

<b>Windows</b>	PuTTY, HTerm etc. Check COMX port in Device Manager
<b>Linux</b>	cat command. eg: cat /dev/ttyACM0
<b>Mac</b>	screen command, eg: screen /dev/tty.usbmodem9F31

Table 3: Terminal Applications for various OS Environments

- For communication over BLE you can use the Serial over BLE tool at: <https://wiki.makerdiary.com/web-device-cli/>

Table 4: Tested Terminal Applications for various OS Environments

Platform	Terminal Application
<b>Windows</b>	Tested with PuTTY, HTerm etc. by checking COMX port in Device Manager
<b>Linux</b>	not provided need to be self-tested
<b>Mac</b>	not provided need to be self-tested

## 2.2.2 Running BHyCLI in PC mode

In PC mode, the BHyCLI application runs on a PC and communicates to the BHy Sensor Hub through a base application running on the application board.

The base application is a middleware between the PC application (BHyCLI) and the BHy Sensor Hub Firmware (referenced in section 2.3).

Figure 5: PC Mode

### Execute BHyCLI in PC Mode:

- To prepare the application board (**<board>**: app30 or app31) for first use, connect the Application Board to a PC, and load the base firmware to the evaluation board.
  - Execute, (Refer Figure 3 above for release package folder structure)  
`<release>/firmware/<board>/coins_bridge/update_coins_bridge_flash_fw.bat`
- Reset Board.
- Move to `<release>/PC/bin` folder to run BHyCLI application in PC mode.
  - Executable present in x86/x64 folder based on 32-bit/64-bit compiler used.
  - I2C and SPI Executables are present for BHyCLI.
  - Refer Table below for Platform/Usage reference.

**Note:** As the base application is being loaded onto the external Flash of the application board, this step needs to be done only once during the first-time setup.

The BHyCLI in PC mode is run as a terminal command, and this depends on the local operating system.

Table 5: PC Mode execution across various OS Environments

Platform	Usage
<b>Windows</b>	spi_bhycli.exe [<options>] [<option arguments>] OR spi_bhycli.exe [port] [COMx] [<options>] [<option arguments>]
<b>Linux</b>	./spi_bhycli [<options>] [<option arguments>]
<b>MAC</b>	./spi_bhycli [<options>] [<option arguments>]

**Note:** When running an application in PC mode, each prompt triggers a re-initialization of the application. As such, when multiple BHyCLI commands need to be executed in sequence, run all the commands in a single command prompt execution, to avoid re-initializing the BHyCLI each time, e.g.:

```
spi_bhycli.exe [<cmd_1> <cmd_1_arguments>] [<cmd_2> <cmd_2_arguments>].. [<cmd_n> <cmd_n_arguments>]
```

## 2.3 Sensor Hub Setup

The BHy, as programmable Smart Sensor Hubs, contain an embedded microcontroller that must be loaded with an appropriate firmware image to use their Smart Sensor features.

Figure 6: Smart Sensor Architecture

To load the firmware onto the BHy microcontroller, first select the relevant firmware and use the boot commands of BHyCLI to load the firmware and boot the device. The BHy generic firmware is in the **'BHI3-firmwares'** folder of the **Release package**.

**Note:** User can either use the provided example firmware located in the 'BHI3-firmwares' folder, or they can create a firmware of their own and use it. Details regarding creating a custom firmware can be found in the [BHy FW SDK User Guide](#)

See [Section 3.3 Boot Commands](#) for more details.

## 3 BHyCLI Commands

### 3.1 Overview

The commands supported by the BHyCLI can be classified as follows:

- Info
- Boot
- Register Read/Write
- Parameter Read/Write
- Data Acquisition
- Log Generation
- Use Case Specific
- System Parameters
- BSX Algorithm Parameters
- Virtual Sensor Information Parameters
- Virtual Sensor Configuration Parameters
- BSEC Parameters
- Physical Sensor Configuration
- Activity Recognition Parameters
- Data Injection
- Diagnostics
- Utility Commands

The following table lists the commands available in BHyCLI [v0.5.0].

Feature Class	Command	Description
Info	<b>-h OR help</b>	List the available commands along with their usage
	<b>version</b>	Prints the HW, SW and FW version
	<b>-i OR info</b>	Show device information
	<b>-p OR physeninfo</b>	Display Physical Sensor Information of a physical sensor

	<b>schema</b>	Display the schema of the available sensors
	<b>chipid</b>	Get Chip ID of the sensor
<b>Boot</b>	<b>-n OR reset</b>	Reset sensor hub
	<b>ram</b>	Upload firmware to RAM
	<b>-e OR erase</b>	Erase external Flash
	<b>fl</b>	Upload firmware to external Flash
	<b>-g OR boot</b>	Boot from the specified medium -ram/flash
	<b>-b OR ramb</b>	Reset, upload specified firmware to RAM and boot from RAM
	<b>-d OR flb</b>	Reset, upload specified firmware to Flash and boot from Flash
	<b>efd</b>	Erase the flash descriptor
<b>Register Read/Write</b>	<b>-r OR rd</b>	Read from register
	<b>-w OR wr</b>	Write to register
<b>Parameter Read/Write</b>	<b>-s OR rdp</b>	Read parameter
	<b>-t OR wrp</b>	Write parameter
<b>Data Acquisition</b>	<b>-c OR actse</b>	Activate/Deactivate the sensor in ascii streaming mode
	<b>hexse</b>	Activate/Deactivate the sensor in hex streaming mode
	<b>logse</b>	Activate/Deactivate the sensor in hex streaming mode
	<b>dactse</b>	Deactivate all the active sensors
	<b>-a OR addse</b>	Register the expected payload of a new custom virtual sensor
	<b>lsactse</b>	List the active sensors and their respective acquisition modes
<b>Log Generation</b>	<b>attlog</b>	Attach (and create if required) a log file (write-only), where data can be logged to
	<b>detlog</b>	Detach the log file
	<b>logandstream</b>	Log and stream data for sensor
<b>Multi Tap</b>	<b>mtapen</b>	Enable the Multi Tap
	<b>mtapinfo</b>	Get the Multi Tap Info
	<b>mtapsetcnfg</b>	Set the Multi Tap Configurations
	<b>mtapgetcnfg</b>	Get the Multi Tap Configurations
<b>System Parameters</b>	<b>syssetphyseninfo</b>	Set system param physical sensor information
	<b>sysgetphysenlist</b>	Get list of physical sensors
	<b>sysgetvirsenlist</b>	Get list of virtual sensors
	<b>sysgettimestamps</b>	Get system timestamps
	<b>sysgetfwversion</b>	Get system firmware version
	<b>sysgetfifoctrl</b>	Get FIFO control
	<b>syssetwkffctrl</b>	Set watermark for wake-up FIFO control
	<b>syssetnwkkffctrl</b>	Set watermark for Non wake-up FIFO control
	<b>sysgetmectrl</b>	Get meta event control
	<b>syssetmectrl</b>	Set meta event control
<b>BSX Algorithm Parameters</b>	<b>setbsxparam</b>	Set bsx algo calibration states
	<b>getbsxparam</b>	Get bsx algo calibration states
	<b>getbsxver</b>	Get the BSX version
<b>Virtual Sensor Information Parameters</b>	<b>virtseinfo</b>	Gets virtual sensor information
<b>Virtual Sensor Configuration Parameters</b>	<b>setvirtsenconf</b>	Set virtual sensor configuration
	<b>getvirtsenconf</b>	Get virtual sensor configuration
<b>BSEC Parameters</b>	<b>bsecsetalstate</b>	Set the BSEC Algorithm State
	<b>bsecgetalstate</b>	Get the BSEC Algorithm State
	<b>bsecsettempoff</b>	Set the BSEC Temperature Offset
	<b>bsecgettempoff</b>	Get the BSEC Temperature Offset

	<b>bsecsetsamrate</b>	Set the BSEC Sample Rate
	<b>bsecgetsamrate</b>	Get the BSEC Sample Rate
<b>Physical Sensor Control</b>	<b>accsetfoc</b>	Set the Accelerometer Fast Offset Calibration
	<b>accgetfoc</b>	Get the Accelerometer Fast Offset Calibration
	<b>accsetpwm</b>	Set the Accelerometer Power Mode
	<b>accgetpwm</b>	Get the Accelerometer Power Mode
	<b>accsetar</b>	Set the Accelerometer Axis Remap
	<b>accgetar</b>	Get the Accelerometer Axis Remap
	<b>acctrignvm</b>	Accelerometer Trigger NVM
	<b>accgetnvm</b>	Get the Accelerometer NVM Status
	<b>gyrosetfoc</b>	Set the Gyroscope Fast Offset Calibration
	<b>gyrogetfoc</b>	Get the Gyroscope Fast Offset Calibration
	<b>gyrosetois</b>	Set the Gyroscope OIS state
	<b>gyrogetois</b>	Get the Gyroscope OIS status
	<b>gyrosetfs</b>	Set the Gyroscope Fast Startup
	<b>gyrogetfs</b>	Get the Gyroscope Fast Startup status
	<b>gyrosetcrt</b>	Start Gyroscope CRT
	<b>gyrogetcrt</b>	Get the Gyroscope CRT status
	<b>gyrosetpwm</b>	Set the Gyroscope Power Mode
	<b>gyrogetpwm</b>	Get the Gyroscope Power Mode
	<b>gyrosettat</b>	Set the Gyroscope Timer Auto Trim state
	<b>gyrogettata</b>	Get the Gyroscope Timer Auto Trim status
	<b>gyrotrignvm</b>	Gyroscope Trigger NVM
	<b>gyrogetnvm</b>	Get the Gyroscope NVM Status
	<b>magsetpwm</b>	Set the Magnetometer Power Mode
	<b>maggetpwm</b>	Get the Magnetometer Power Mode
	<b>wwwsetcnfg</b>	Set the Wrist Wear Wakeup Configuration
	<b>wwwgetcnfg</b>	Get the Wrist Wear Wakeup Configuration
	<b>amsetcnfg</b>	Set the Any Motion Configuration
	<b>amgetcnfg</b>	Get the Any Motion Configuration
	<b>nmsetcnfg</b>	Set the No Motion Configuration
	<b>nmgetcnfg</b>	Get the No Motion Configuration
	<b>wgdsetcnfg</b>	Set the Wrist Gesture Detector Configuration
	<b>wgdgetcnfg</b>	Get the Wrist Gesture Detector Configuration
	<b>baro1setcnfg</b>	Set the Barometer Pressure Type 1 Configuration
	<b>baro1getcnfg</b>	Get the Barometer Pressure Type 1 Configuration
	<b>baro2setcnfg</b>	Set the Barometer Pressure Type 2 Configuration
	<b>baro2getcnfg</b>	Get the Barometer Pressure Type 2 Configuration
	<b>scsetcnfg</b>	Set the Step Counter Configuration
	<b>scgetcnfg</b>	Get the Step Counter Configuration
	<b>phyrangeconf</b>	Set the range of physical sensor
	<b>foc</b>	Enable the fast offset compensation for the sensor
<b>Activity Recognition Parameters</b>	<b>sethearactvcnfg</b>	Set the Hearable Activity Configuration
	<b>gethearactvcnfg</b>	Get the Hearable Activity Configuration
	<b>setwearactvcnfg</b>	Set the Wearable Activity Configuration
	<b>getwearactvcnfg</b>	Get the Wearable Activity Configuration
<b>Head Orientation</b>	<b>hmctrig</b>	Trigger Head Misalignment Calibration
	<b>hmcsetcnfg</b>	Set the Head Misalignment Configuration
	<b>hmcgetcnfg</b>	Get the Head Misalignment Configuration
	<b>hmcsetdefcnfg</b>	Set the Default Head Misalignment Configuration

	<b>hmcver</b>	Get Head Misalignment Calibrator Version
	<b>hmcsetcalcorrq</b>	Set the Head Misalignment Quaternion Calibration Correction
	<b>hmcgetcalcorrq</b>	Get the Head Misalignment Quaternion Calibration Correction
	<b>hmcsetmode</b>	Set the Head Misalignment Mode
	<b>hmcgetmode</b>	Get the Head Misalignment Mode
	<b>hmcsetheadcorrq</b>	Set Initial Heading Correction, only for IMU Head Orientation Quaternion
	<b>hmcgetheadcorrq</b>	Get Initial Heading Correction, only for IMU Head Orientation Quaternion
	<b>hover</b>	Get IMU/NDOF Head Orientation Version
	<b>hmcsetheadcorre</b>	Set Initial Heading Correction, only for IMU Head Orientation Euler
	<b>hmcgetheadcorre</b>	Set Initial Heading Correction, only for IMU Head Orientation Euler
<b>Data Injection</b>	<b>dmode</b>	Switch to Data Injection mode
	<b>dinject</b>	Compute virtual sensor output from raw IMU data
<b>Diagnostics</b>	<b>-m OR postm</b>	Get Post Mortem Data and log to a file
<b>Utility</b>	<b>-v OR verb</b>	Set the verbose level.
	<b>echo</b>	Enable/Disable echo
	<b>heart</b>	Enable/disable Heartbeat Message
	<b>mklog</b>	Create a log file
	<b>rm</b>	Remove a log file
	<b>ls</b>	List the files in the external Flash
	<b>wrfile</b>	Write to a log file
	<b>rdfile</b>	Read from a log file
	<b>slabel</b>	Set a string label in the log file
	<b>cls</b>	Clear Screen
	<b>strbuf</b>	Set the streaming buffer size

Table 6: BHyCLI Commands

This chapter explains the usage of the commands with the help of examples to guide users on how to operate the BHy.

**Note:** The outputs provided for reference are generated in **MCU** mode over **BLE** communication.

## 3.2 Info Commands

The Info commands are commands oriented towards giving System and Application specific information.

Feature Class	Command	Description
<b>Info</b>	<b>-h OR help</b>	List the available commands along with their usage
	<b>version</b>	Prints the HW, SW and FW version
	<b>-i OR info</b>	Show device information
	<b>-p OR physeninfo</b>	Display Physical Sensor Information of a physical sensor
	<b>schema</b>	Display the schema of the available sensors
	<b>chipid</b>	Get Chip ID of the sensor

Table 7: Overview of Info Commands

Get Info -	
Action	Usage
Get BHyCLI Application Info	help
Get BHyCLI Application Version Details	version
Get System Info	info
Get Physical Sensor Information of a physical sensor	physeninfo <phy_sensor_id>, eg: physeninfo 1
Get schema of the available sensors	schema
Get Chip ID of the sensor	chipid

Table 8: Info Commands Usage

### 3.2.1 Help

```

help
Usage:
bhy2cli [<options>]
Options:
-h OR help    = Print this usage message
version
    = Prints the version
-v OR verb <verbose level>
    = Set the verbose level. 0 Error, 1 Warning, 2 Infos
-b OR ramb <firmware path>
    = Reset, upload specified firmware to RAM and boot from RAM
    [equivalent to using "reset ram <firmware> boot r" successively]
-d OR flb <firmware path>
    = Reset, upload specified firmware to Flash and boot from Flash
    [equivalent to using "reset fl <firmware path> boot f" successively]
-n OR reset   = Reset sensor hub
-a OR addse <sensor id>:<sensor name>:<total output payload in bytes>:
    <output_format_0>:<output_format_1>
    = Register the expected payload of a new custom virtual sensor
    -Valid output formats: u8: Unsigned 8 Bit, u16: Unsigned 16 Bit, u32:
      Unsigned 32 Bit, s8: Signed 8 Bit, s16: Signed 16 Bit, s32: Signed 32 Bit,
      f: Float, c: Char
    -e.g.: addse 160:"Lean Orientation":2:c:c
    -Note that the corresponding virtual sensor has to be enabled in the same function
      call (trailing actse option), since the registration of the sensor is temporary.
-g OR boot <medium>
    = Boot from the specified <medium>: "f" for FLASH, "r" for RAM
-c OR actse <sensor id>:<frequency>[:<latency>]
    = Activate sensor <sensor id> at specified sample rate <frequency>,
    -latency <latency>, duration time <time>, sample counts <count>
    -At least <frequency> is a must input parameter

### 3.2.6 Chip ID

```
chipid
CHIP ID : 0x7a
```

Figure 12: 'chipid' Output

## 3.3 Boot Commands

The boot commands are used to load and boot the firmware of the BHy sensor hubs.

The firmware can be loaded by the application board into the Fuser2 RAM and then booted or in the case of the BHI260AP, loaded to and booted from external Flash present in the BHy sensor hub.

**Note:** The external Flash feature is not available in BHI3XX sensor hubs, as such, Flash specific boot commands are not supported in this case.

Feature Class	Command	Description
Boot	<b>-n OR reset</b>	Reset sensor hub
	<b>-u OR ram</b>	Upload firmware to RAM
	<b>-e OR erase</b>	Erase external Flash
	<b>-f OR fl</b>	Upload firmware to external Flash
	<b>-g OR boot</b>	Boot from the specified medium -ram/flash
	<b>-b OR ramb</b>	Reset, upload specified firmware to RAM and boot from RAM
	<b>-d OR flb</b>	Reset, upload specified firmware to Flash and boot from Flash
	<b>efd</b>	Erase the flash descriptor

Table 9: Overview of Boot Commands

To upload firmware to the sensor hub -		
Action	Location	Usage
Reset the Sensor Hub		reset
Upload firmware	to RAM	ram <ram_firmware_path>, eg: ram Bosch_Shuttle3_BHlxyz.fw
	to external Flash	fl <flash_firmware_path>, eg: fl BHI260AP-flash.fw
Boot Sensor Hub	from RAM	boot r
	from external Flash	boot f
Alternatively, uploading the firmware and booting can be done using a single command	from RAM	ramb <ram_firmware_path>, eg: ramb Bosch_Shuttle3_BHlxyz.fw
	from external Flash	flb <flash_firmware_path>, eg: flb BHI260AP-flash.fw

Table 10: Boot Commands Usage

**Note:** Depending on the firmware boot location (RAM/External Flash), different firmware needs to be loaded, as demonstrated in the above protocol. The Flash compatible firmware follows the **xxx-flash.fw** naming convention.

**Note:** For **MCU** mode, the application board addresses the firmware path from the external Flash of the application board. The firmware is pre-loaded to the external Flash of the application board. For **PC mode**, the location of the firmware is passed as path.

### 3.3.1 Booting from Ram

```

reset
Reset successful

ram Bosch_Shuttle3_BHI380_BME680.fw
Uploading 155916 bytes of firmware to RAM
Uploading firmware to RAM successful

boot r
Waiting for firmware verification to complete
Boot Status : 0x38: No flash installed. Host interface ready. Firmware verification done.
[D][META EVENT WAKE UP]; T: 0.534265625; Firmware initialized. Firmware version 5991
[D][META EVENT]; T: 0.534265625; Firmware initialized. Firmware version 5991
Booting from RAM successful

```

Figure 13: RAM Boot using 'ram' and 'boot'

```

ramb Bosch_Shuttle3_BHI380_BME680.fw
Reset successful
Uploading 155916 bytes of firmware to RAM
Uploading firmware to RAM successful
Waiting for firmware verification to complete
Boot Status : 0x38: No flash installed. Host interface ready. Firmware verification done.
[D][META EVENT WAKE UP]; T: 0.534250000; Firmware initialized. Firmware version 5991
[D][META EVENT]; T: 0.534250000; Firmware initialized. Firmware version 5991
Booting from RAM successful

boot r
Waiting for firmware verification to complete
Boot Status : 0x38: No flash installed. Host interface ready. Firmware verification done.
Booting from RAM successful

```

Figure 14: RAM Boot using 'ramb'

### 3.3.2 Booting from Flash

```

reset
Reset successful

fl BHI260AP-flash.fw
Erasing first 111580 bytes of flash
Uploading 111580 bytes of firmware to flash
Uploading firmware to flash successful

boot f
Waiting for firmware verification to complete
Boot Status : 0x11: Flash detected. Host interface ready.
Booting from flash
Boot Status : 0x13: Flash detected. Flash verify done. Host interface ready.
[D][META EVENT WAKE UP]; T: 0.151203125; Firmware initialized. Firmware version 5991
[D][META EVENT]; T: 0.151203125; Firmware initialized. Firmware version 5991
Booting from flash successful

```

Figure 15: Flash Boot using 'boot'

```

reset
Reset successful

flb BHI260AP-flash.fw
Reset successful
Erasing first 111580 bytes of flash
Uploading 111580 bytes of firmware to flash
Uploading firmware to flash successful
Waiting for firmware verification to complete
Boot Status : 0x11: Flash detected. Host interface ready.
Booting from flash
Boot Status : 0x13: Flash detected. Flash verify done. Host interface ready.
[D][META EVENT WAKE UP]; T: 0.151390625; Firmware initialized. Firmware version 5991
[D][META EVENT]; T: 0.151390625; Firmware initialized. Firmware version 5991
Booting from flash successful

```

Figure 16: Flash Boot using 'flb'

**Note:** Fuser Core in the BHy Sensor Hub acts as the intermediary between the Host Application and the Physical Sensor on the BHy Sensor Hub. The interaction of the Fuser Core is defined by the firmware (BHy Firmware Image), running in it. As such, it is important to make sure that a firmware is loaded onto the Fuser Core. If not, use the above commands to load the firmware.

### 3.3.3 Erase external Flash

The **'erase'** command is used to erase the external Flash of the BHy Sensor Hub. Use the **'reset'** command to reset the Sensor Hub prior to executing the erase operation.

Erase BHy Sensor Hub External Flash -	
Action	Usage
Reset the Sensor Hub	<code>reset</code>
Erase the Flash	<code>erase</code>

Table 11: 'erase' Command Usage

```
reset
Reset successful

erase
Erasing flash. May take a while
Erasing flash successful
```

Figure 17: Erase external Flash using 'erase'

### 3.3.4 Erase Flash Descriptor

The **'efd'** command is used to erase the Flash Descriptor section of the external Flash of the BHy Sensor Hub. As mentioned earlier, use the **'reset'** command to reset the Sensor Hub prior to executing the erase flash descriptor operation.

Erase Flash Descriptor -	
Action	Usage
Reset the Sensor Hub	<code>reset</code>
Erase the Flash Descriptor	<code>efd</code>

Table 12: 'efd' Command Usage

```
reset
Reset successful

efd
Erasing flash descriptor. This might hang if a reset command before this was not issued
Erasing flash descriptor successful
```

Figure 18: Erase Flash Descriptor using 'erase'

## 3.4 Register Read/Write Commands

The Read/Write commands allow the user to read/write the BHy. This feature can also be extended to read/write various system and application specific parameters.

Feature Class	Command	Description
Register Read/Write	<code>-r OR rd</code>	Read from register
	<code>-w OR wr</code>	Write to register

Table 13: Register Read/Write Commands Overview

To explore the functionality of the register read/write commands -	
Action	Usage
Read from a particular register up to <i>n</i> bytes	<code>rd &lt;reg_addr&gt;:&lt;len&gt;</code> , eg: <code>rd 0x07:4</code>
Write from a particular register onwards	<code>wr &lt;reg_addr&gt;=&lt;val1&gt;,&lt;val2&gt;...</code> , eg: <code>wr 0x07=0x0a,0x0b,0x0c,0x0d</code>
Validate the write operation by reading back the written registers	<code>rd 0x07:4</code>

Table 14: Register Read/Write Commands Usage

```

rd 0x07:4
Register address: Data
-----
0x07          : 00
0x08          : 00
0x09          : 00
0x0a          : 00
Read complete

wr 0x07=0x0a,0x0b,0x0c,0x0d
Writing address successful

rd 0x07:4
Register address: Data
-----
0x07          : 0a
0x08          : 0b
0x09          : 0c
0x0a          : 0d
Read complete

```

Figure 19: Read and Write from register

### 3.5 Parameter Read/Write Commands

The parameter interface is used to allow the configuration and query the state of the system and the sensors. The parameters differ from the normal registers because the length of data transfer is pre-determined and access to a particular set of parameters is dependent on the loaded firmware. **[For more details, refer section 13.3 in [BHIxyz Datasheet](#)].**

Feature Class	Command	Description
Parameter Read/Write	-s OR rdp	Read parameter
	-t OR wrp	Write parameter

Table 15: Parameter Read/Write Commands Overview

To explore the functionality of the register read/write commands -	
Action	Usage
Read a parameter	rdp <param_id>, eg: rdp 0x103
Write to a parameter	wrp <param_id>=<val1>,<val2>.., eg: wrp 0x103=0x05,0x06
Validate the write operation by reading back the written parameter	rdp 0x103

Table 16: Parameter Read/Write Commands Usage

```

rdp 0x103
Byte hex      dec | Data
-----
0x000000      0 | 00 00 00 00 00 48 00 00
0x000008      8 | 00 00 00 00 00 48 00 00
0x000010     16 | 80 01 00 00
Reading parameter 0x0103 successful

wrp 0x103=0x05,0x06
Writing parameter successful

rdp 0x103
Byte hex      dec | Data
-----
0x000000      0 | 05 06 00 00 00 48 00 00
0x000008      8 | 00 00 00 00 00 48 00 00
0x000010     16 | 80 01 00 00
Reading parameter 0x0103 successful

```

Figure 20: Read and Write from parameter

### 3.6 Data Acquisition Commands

Data acquisition commands allow the user to configure the ODR, latency of specific virtual sensors as well as to control output data quantity and activation duration. The tool provides provision for streaming and logging the data.

Feature Class	Command	Description
Data Acquisition	<b>-c OR actse</b>	Activate/Deactivate the sensor in ascii streaming mode
	<b>hexse</b>	Activate/Deactivate the sensor in hex streaming mode
	<b>logse</b>	Activate/Deactivate the sensor in hex streaming mode
	<b>dactse</b>	Deactivate all the active sensors
	<b>-a OR addse</b>	Register the expected payload of a new custom virtual sensor
	<b>lsactse</b>	List the active sensors and their respective acquisition modes

Table 16: Data Acquisition Commands Overview

Sensor Acquisition -			
Action	Configuration	Mode	Usage
Reset the Sensor Hub			reset
Upload firmware	to RAM		ramb <ram_firmware>, eg: ram BHI260AP.fw
	to external Flash		flb <flash_firmware>, eg: fl BHI260AP-flash.fw
Enable the sensor acquisition	single sensor	ascii streaming	actse <id>:<odr>, eg: actse 4:100
		hex streaming	hexse <id>:<odr>, eg: hexse 4:100
		logging	logse <id>:<odr>, eg: logse 4:100
	multiple sensors	ascii streaming	actse <id1>:<odr> actse <id2>:<odr>, eg: actse 4:100 actse 13:50
		hex streaming	hexse <id1>:<odr> hexse <id2>:<odr>, eg: hexse 4:100 hexse 13:50
		logging	logse <id1>:<odr> logse <id2>:<odr>,

			eg: logse 4:100 logse 13:50
	latency	ascii streaming	actse <id>:<odr>:<latency>, eg: actse 4:100:1000
		hex streaming	hexse <id>:<odr>:<latency>, eg: hexse 4:100:1000
		logging	logse <id>:<odr>:<latency>, eg: logse 4:100:1000
List all the active sensors	generic	all modes	lsactse
Disable the sensor acquisition	single sensor	ascii streaming	actse <id>:0, eg: actse 4:0
		hex streaming	hexse <id>:0, eg: hexse 4:0
		logging	logse <id>:0, eg: logse 4:0
	multiple sensors	ascii streaming	actse <id1>:0 actse <id2>:0, eg: actse 4:0 actse 13:0
		hex streaming	hexse <id1>:0 hexse <id2>:0, eg: hexse 4:0 hexse 13:0
		logging	logse <id1>:0 logse <id2>:0, eg: logse 4:0 logse 13:0
	single Shot	all modes	dactse
Define parsing format for a new/custom sensor	generic	all modes	addse<id>:"name":<payload (in bytes)>:<paring_format> eg: addse 161:"Altitude":4:s32

Table 17: Data Acquisition Commands Usage

**Note:** The usage of the 'logse' command requires some pre-requisites, which are discussed in [Section 3.7 Log Generation Commands](#).

### 3.6.1 Activate sensor

#### 3.6.1.1 Activate one virtual sensor

```

### 3.6.4 Custom/New Virtual Sensor

For a new virtual sensor or for any virtual sensor that is not supported in the BHyCLI application, it is still possible to use the virtual sensor in BHyCLI by using the 'addse' command.

Feature Class	Command	Description
<b>Custom/New Virtual Sensor Support</b>	<b>addse</b>	Extend support for a new/custom virtual sensor, which is not yet supported in the BHyCLI application

Table 17: Custom/New Virtual Sensor support Extension

Adding support for Custom/New Virtual Sensor -	
Action	Usage
Reset the sensor hub	reset
Load the custom firmware with support for custom/new virtual sensor	ramb <custom_firmware> or <flb <custom_firmware>
Check if support available for custom/virtual by reading the list of virtual sensor	info
Extend the support for the Custom/New virtual sensor in BHy	addse <sensor_id>:"<sensor_name>":<parse_size>:<parse_format> eg: addse161:"Test_Sensor ":4:s32
Enable the custom/new virtual sensor	actse <custom_sensor_id>, eg: actse 161:50

Table 18: Adding support for Custom/New Virtual Sensor

```
addse 161:"test_sensor":4:s32
Adding custom driver payload successful

Figure 30: Custom/New virtual Sensor Acquisition

### 3.7 Log Generation Commands

The log generation commands are used in conjunction with the 'logse' command to acquire the data in logging mode and store the log in the external Flash.

Feature Class	Command	Description
Log Generation	<b>attlog</b>	Attach (and create if required) a log file (write-only), where data can be logged to
	<b>detlog</b>	Detach the log file
	<b>logandstream</b>	Log and stream data for sensor

Table 19: Log Generation Commands Overview

Sensor in Logging mode -	
Action	Usage
Attach a log file for the logging	attlog <file_name.file_extension>, eg: attlog abc.bin
Enable the sensor acquisition in logging mode	logse <id>:<odr>, eg: logse 4:100
Disable the sensor acquisition	logse <id>:0, eg: logse 4:0
Detach log file from logging	detlog <file_name.file_extension>, eg: detlog abc.bin
Log and stream data for sensor with downsampling	logandstream <sensor id>:<frequency>[:<latency>][:<downsampling>] <filename> <start> or logandstream <stop> eg: logandstream 3:50::10 4:100::20 log.bin start logandstream stop

Figure 32: 'logandstream' Command Usage

## 3.8 Use Case Specific Commands

The use case specific commands allow the user to read/write and configure the various controls and parameters for various use case applications such as Multi-tap, etc.

**Note:** Before executing various Use Case Specific commands, ensure that firmware for the respective Use Case Applications is flashed onto the BHy Sensor Hub.

### 3.8.1 Multi Tap

The Multi-Tap sensor detects single, double and triple taps. The following commands configure and enable/disable the various aspects of the Multi-Tap sensor.

Feature Class	Command	Description
Multi Tap	<b>mtapen</b>	Enable the Multi Tap
	<b>mtapinfo</b>	Get the Multi Tap Info
	<b>mtapsetcnfg</b>	Set the Multi Tap Configurations
	<b>mtapgetcnfg</b>	Get the Multi Tap Configurations,

Table 21: Multi-Tap Commands Overview

Multi-Tap commands usage -	
Command	Usage
<b>mtapen</b>	<b>mtapen</b> <tap_setting>, eg: mtapen 2
<b>mtapinfo</b>	<b>mtapinfo</b>
<b>mtapsetcnfg</b>	<b>mtapsetcnfg</b> <single_tap_config> <double_tap_config> <triple_tap_config> eg: mtapsetcnfg 0x0080 0x4022 0x6862 <b>Note:</b> The single/double/triple tap configurations passed as arguments to this command are in combined format. Refer above table for specifics. Refer datasheet for bit mapping
<b>mtapgetcnfg</b>	<b>mtapgetcnfg</b>

Figure 33: Multi-Tap Commands Output

### 3.8.2 Head Orientation

The head orientation tracking software processes the raw sensor input to estimate head orientation information with respect to the Earth reference system. It combines functional modules and a set of calibration routines to correct the original sensor input, IMU and NDOF fusion algorithms, misalignment estimation between the head and device coordinate system and the rotation transformation between different reference systems.

Feature Class	Command	Description
Head Orientation	<b>hmctrig</b>	Trigger Head Misalignment Calibration
	<b>hmcsetcnfg</b>	Set the Head Misalignment Configuration
	<b>hmcgetcnfg</b>	Get the Head Misalignment Configuration
	<b>hmcsetdefcnfg</b>	Set the Default Head Misalignment Configuration
	<b>hmcver</b>	Get Head Misalignment Calibrator Version
	<b>hmcsetcalcorrq</b>	Set the Head Misalignment Quaternion Calibration Correction

	<b>hmcgetcalcorrq</b>	Get the Head Misalignment Quaternion Calibration Correction
	<b>hmcsetmode</b>	Set the Head Misalignment Mode
	<b>hmcgetmode</b>	Get the Head Misalignment Mode
	<b>hosetheadcorrq</b>	Set Initial Heading Correction, only for IMU Head Orientation Quaternion
	<b>hogetheadcorrq</b>	Get Initial Heading Correction, only for IMU Head Orientation Quaternion
	<b>hover</b>	Get IMU/NDOF Head Orientation Version
	<b>hosetheadcorre</b>	Set Initial Heading Correction, only for IMU Head Orientation Euler
	<b>hogetheadcorre</b>	Set Initial Heading Correction, only for IMU Head Orientation Euler

Table 23: Head Orientation Commands Overview

Head Orientation commands usage -	
Command	Usage
hmcver	hmcver
hover	hover
hmcsetcnfg	hmcsetcnfg <sp_max_dur> <sp_min_dur> <dp_max_samples> <acc_diff_th> eg: hmcsetcnfg 0x06 0x02 0x32 0x00002042
hmcgetcnfg	hmcgetcnfg
hmcsetdefcnfg	hmcsetdefcnfg
hmcsetdefcnfg	hmcsetdefcnfg

hmcgetcalcorrq	hmcgetcalcorrq
hmcsetmode	hmcsetmode <mode> <x[0]> <x[1]> <x[2]> eg. hmcsetmode 0 0x00000000 0x00000000 0x3f800000
hmcgetmode	hmcgetmode
hosetheadcorrq	hosetheadcorrq <enable/disable> eg: hosetheadcorrq 1
hogetheadcorrq	hogetheadcorrq
hosetheadcorre	hosetheadcorre <enable/disable> eg: hosetheadcorre 1
hogetheadcorre	hogetheadcorre

Table 24: Head Orientation Commands Usage

Please refer [Head Orientation Application Note](#) for more details on the Head Orientation application.

### 3.9 System Parameters Commands

The following commands allow the host to set or get system parameters.

Feature Class	Command	Description
System Parameters	<b>syssetphyseninfo</b>	Set system param physical sensor information
	<b>sysgetphysenlist</b>	Get list of physical sensors
	<b>sysgetvirsenlist</b>	Get list of virtual sensors
	<b>sysgettimestamps</b>	Get system timestamps
	<b>sysgetfwversion</b>	Get system firmware version
	<b>sysgetfifoctrl</b>	Get FIFO control
	<b>syssetwkffctrl</b>	Set watermark for wake-up FIFO control
	<b>syssetnwffctrl</b>	Set watermark for Non wake-up FIFO control
	<b>sysgetmectrl</b>	Get meta event control

	<b>syssetmectl</b>	Set meta event control
--	--------------------	------------------------

Table 25: System Parameters Commands Overview

System Parameters commands usage -	
Command	Usage
syssetphyseninfo	syssetphyseninfo <sensor_id> <orientation_matrix> eg. syssetphyseninfo 1 0,-1,0,1,0,0,0,1
sysgetphysenlist	sysgetphysenlist
sysgetvirsenlist	sysgetvirsenlist
sysgettimestamps	sysgettimestamps
sysgetfwversion	sysgetfwversion
sysgetfifoctrl	sysgetfifoctrl
syssetwkffctrl	syssetwkffctrl <watermark value> eg. syssetwkffctrl 500
syssetnwkkffctrl	syssetnwkkffctrl <watermark value> eg. syssetnwkkffctrl 500
sysgetmectl	sysgetmectl <address> eg. sysgetmectl 0x101
syssetmectl	syssetmectl <address> <group idx> <value> eg. syssetmectl 0x101 1 1

### 3.10 BSX Algorithm Parameters Commands

The following commands allow the host to set or get BSX Algorithm parameters.

Feature Class	Command	Description
BSX Algorithm Parameters	<b>setbsxparam</b>	Set bsx algo calibration states
	<b>getbsxparam</b>	Get bsx algo calibration states
	<b>getbsxver</b>	Get the BSX version

Table 27: BSX Algorithm Parameters Commands Overview

BSX Algorithm commands usage -	
Command	Usage
setbsxparam	setbsxparam <parameter_id> or <parameter_id> <file_name> eg. setbsxparam 0x201
getbsxparam	getbsxparam <parameter_id> or <parameter_id> <file_name> eg. getbsxparam 0x201
getbsxver	getbsxver

Table 28: BSX Algorithm Parameters Commands Usage

  FIFO reserved: 0
  FIFO max: 2633
  Event size: 7
  Min rate: 1.562500
```

Figure 36: Virtual Sensor Information Command Output

### 3.12 Virtual Sensor Configuration Parameters Commands

The following commands allow the host to set or get Virtual Sensor Configuration Parameters.

Feature Class	Command	Description
Virtual Sensor Configuration Parameters	<b>setvirtsenconf</b>	Set virtual sensor configuration
	<b>getvirtsenconf</b>	Get virtual sensor configuration

Table 31: Virtual Sensor Configuration Parameters Commands Overview

Virtual Sensor Configuration Parameters commands usage -	
Command	Usage
setvirtsenconf	setvirtsenconf <sensor_id> <sample_rate> <latency> eg. setvirtsenconf 3 10 0

<code>getvirtsenconf</code>	<code>getvirtsenconf &lt;sensor_id&gt;</code>
-----------------------------	---

Table 32: Virtual Sensor Configuration Parameters Commands Usage

```

setvirtsenconf 3 10 0
Virtual sensor configuration set successfully
[D][META EVENT]; T: 296.813750000; Power mode changed for sensor id 3
[D][META EVENT]; T: 296.813750000; Sample rate changed for sensor id 3
getvirtsenconf 3
Virtual sensor configuration get successfully
Custom sensor ID=3, sensitivity=0, rate=12.50Hz,latency=0, range=8

```

Figure 37: Virtual Sensor Configuration Parameters Commands

### 3.13 Physical Sensor Configuration Commands

The following commands allow the host to set or get sensor control information of the physical sensors.

Feature Class	Command	Description
Physical Sensor Control	<code>accsetfoc</code>	Set the Accelerometer Fast Offset Calibration
	<code>accgetfoc</code>	Get the Accelerometer Fast Offset Calibration
	<code>accsetpwm</code>	Set the Accelerometer Power Mode
	<code>accgetpwm</code>	Get the Accelerometer Power Mode
	<code>accsetar</code>	Set the Accelerometer Axis Remap
	<code>accgetar</code>	Get the Accelerometer Axis Remap
	<code>acctrignvm</code>	Accelerometer Trigger NVM
	<code>accgetnvm</code>	Get the Accelerometer NVM Status
	<code>gyrosetfoc</code>	Set the Gyroscope Fast Offset Calibration
	<code>gyrogetfoc</code>	Get the Gyroscope Fast Offset Calibration
	<code>gyrosetois</code>	Set the Gyroscope OIS state
	<code>gyrogetois</code>	Get the Gyroscope OIS status
	<code>gyrosetfs</code>	Set the Gyroscope Fast Startup
	<code>gyrogetfs</code>	Get the Gyroscope Fast Startup status
	<code>gyrosetcrt</code>	Start Gyroscope CRT
	<code>gyrogetcrt</code>	Get the Gyroscope CRT status
	<code>gyrosetpwm</code>	Set the Gyroscope Power Mode
	<code>gyrogetpwm</code>	Get the Gyroscope Power Mode
	<code>gyrosettat</code>	Set the Gyroscope Timer Auto Trim state
	<code>gyrogettata</code>	Get the Gyroscope Timer Auto Trim status
	<code>gyrotrignvm</code>	Gyroscope Trigger NVM
	<code>gyrogetnvm</code>	Get the Gyroscope NVM Status
	<code>magsetpwm</code>	Set the Magnetometer Power Mode
	<code>maggetpwm</code>	Get the Magnetometer Power Mode
	<code>wwwsetcnfg</code>	Set the Wrist Wear Wakeup Configuration
	<code>wwwgetcnfg</code>	Get the Wrist Wear Wakeup Configuration,
	<code>amsetcnfg</code>	Set the Any Motion
	<code>amgetcnfg</code>	Get the Any Motion Configuration
	<code>nmsetcnfg</code>	Set the No Motion Configuration
	<code>nmgetcnfg</code>	Get the No Motion Configuration
	<code>wgdsetcnfg</code>	Set the Wrist Gesture Detector Configuration
	<code>wgdgetcnfg</code>	Get the Wrist Gesture Detector Configuration
	<code>baro1setcnfg</code>	Set the Barometer Pressure Type 1 Configuration
	<code>baro1getcnfg</code>	Get the Barometer Pressure Type 1 Configuration
	<code>baro2setcnfg</code>	Set the Barometer Pressure Type 2 Configuration
	<code>baro2getcnfg</code>	Get the Barometer Pressure Type 2 Configuration
	<code>scsetcnfg</code>	Set the Step Counter Configuration

	<b>scgetcnfg</b>	Get the Step Counter Configuration
	<b>phyrangeconf</b>	Set the range of physical sensor
	<b>foc</b>	Enable the fast offset compensation for the sensor

Table 33: Physical Sensor Control Parameter Commands Overview

### 3.13.1 Accelerometer

The following commands allow the user to configure the accelerometer sensor.

Feature Class	Command	Description
<b>Accelerometer Sensor Control</b>	<b>accsetfoc</b>	Set the Accelerometer Fast Offset Calibration
	<b>accgetfoc</b>	Get the Accelerometer Fast Offset Calibration
	<b>accsetpwm</b>	Set the Accelerometer Power Mode
	<b>accgetpwm</b>	Get the Accelerometer Power Mode
	<b>accsetar</b>	Set the Accelerometer Axis Remap
	<b>accgetar</b>	Get the Accelerometer Axis Remap
	<b>acctrignvm</b>	Accelerometer Trigger NVM
	<b>accgetnvm</b>	Get the Accelerometer NVM Status

Table 34: Accelerometer Control Parameter Commands Overview

Parameter	Description
Fast Offset Calibration	FOC is a one-shot process that compensates errors of the sensor by setting the compensation registers to the negated offset error
Power Mode	The power mode of the accelerometer can be configured to operate in other power modes in order to facilitate use case appropriate performance. The accelerometer sensor has 2 power modes – 0 - Normal Mode, The default state of the sensor 2 - Low Power, Low power mode on the account of trade-of of power consumption versus sensor noise. Low power mode may introduce aliasing artifacts
Axis remapping for internal imu features	The axis remapping function is only works for the features in BHIxyz, and it would not influence the IMU outputs (accel data and gyro data). It can change the sign for each axis and switch between each axis.
Trigger a NVM writing	Once NVM writing process is triggered, the value in backup registers value(offset/crt) will be written into NVM area.

Table 35: Accelerometer Control Parameters

Accelerometer Parameter commands usage -	
Command	Usage
accsetfoc	accsetfoc <x_offset> <y_offset> <z_offset>, eg: accsetfoc 0x0016 0x00f8 0x07f
accgetfoc	accgetfoc
accsetpwm	accsetpwm <power_mode>, eg: accsetpwm 2
accgetpwm	accgetpwm
accsetar	accsetar <x> <x_sign> <y> <y_sign> <z> <z_sign> eg: accsetar 1 1 1 1 1 1
accgetar	accgetar
acctrignvm	acctrignvm
accgetnvm	accgetnvm

Table 36: Accelerometer Control Parameter Commands Usage

```

accsetfoc 0x0072 0x0064 0x007F
Set the Accelerometer Fast Offset Calibration
    -<x_offset> : 114
    -<y_offset> : 100
    -<z_offset> : 127
accgetfoc
Accelerometer Fast Offset Calibration :
    -<x_offset> : 114
    -<y_offset> : 100
    -<z_offset> : 127
accsetpwm 0
Set the Accelerometer Power Mode to NORMAL
accgetpwm
Accelerometer Power Mode : NORMAL
accsetar 1 1 1 1 1 1
Set the Accelerometer axis remapping
    -<x> : 1
    -<x_sign> : 1
    -<y> : 1
    -<y_sign> : 1
    -<z> : 1
    -<z_sign> : 1
accgetar
Accelerometer axis remapping :
    -<x> : 1
    -<x_sign> : 1
    -<y> : 1
    -<y_sign> : 1
    -<z> : 1
    -<z_sign> : 1
acctrignvm
Trigger a NVM writing for accelerometer
accgetnvm
NVM writing status for accelerometer: Done

```

Figure 38: Accelerometer Control Parameter Commands Output

### 3.13.2 Gyroscope

The following commands allow the user to configure the gyroscope sensor.

Feature Class	Command	Description
Gyroscope Sensor Control	<b>gyrosetfoc</b>	Set the Gyroscope Fast Offset Calibration
	<b>gyrogetfoc</b>	Get the Gyroscope Fast Offset Calibration
	<b>gyrosetois</b>	Set the Gyroscope OIS state
	<b>gyrogetois</b>	Get the Gyroscope OIS status
	<b>gyrosetfs</b>	Set the Gyroscope Fast Startup
	<b>gyrogetfs</b>	Get the Gyroscope Fast Startup status
	<b>gyrosetcrt</b>	Start Gyroscope CRT
	<b>gyrogetcrt</b>	Get the Gyroscope CRT status
	<b>gyrosetpwm</b>	Set the Gyroscope Power Mode
	<b>gyrogetpwm</b>	Get the Gyroscope Power Mode
	<b>gyrosettat</b>	Set the Gyroscope Timer Auto Trim state
	<b>gyrogettat</b>	Get the Gyroscope Timer Auto Trim status
	<b>gyrotrignvm</b>	Gyroscope Trigger NVM
	<b>gyrogetnvm</b>	Get the Gyroscope NVM Status

Table 37: Gyroscope Control Parameter Commands Overview

Parameter	Description
Fast Offset Calibration	FOC is a one-shot process that compensates errors of the sensor by setting compensation registers to the negated offset error
Optical Image Stabilization	Optical Image Stabilization mode of the gyroscope sensor
Fast Startup Mode	Fast Startup Mode, when enabled, powers down the measurement part of the Sensor frontend, while keeping the drive and digital parts operational. This allows a faster transition into normal mode while keeping power consumption significantly lower than in normal mode.
Component Re-Trim	Trigger and read back the status of the Component Re-Trimming of the gyroscope sensor.
Power Mode	The power mode of the gyroscope can be configured to operate in other power modes in order to facilitate use case appropriate performance. The gyroscope sensor has 3 power modes – 0 - Normal Mode, The default state of the sensor 1 - Performance Mode 2 - Low Power, Low power mode on the account of trade-of of power consumption versus sensor noise. Low power mode may introduce aliasing artifacts
Timer Auto Trim	Timer Auto Trim allows to sync the Fuser2 timer oscillator PLL. When enabled, the frequency of the timer oscillator is referenced by gyroscope sample rate, benefitting from the high stability of the gyroscope MEMS oscillator. This feature is only applicable when gyroscope is enabled.
Trigger a NVM writing	Once NVM writing process is triggered, the value in backup registers value(offset/crt) will be written into NVM area.

Table 38: Gyroscope Control Parameters

Gyroscope Parameter commands usage -	
Command	Usage
gyrosetfoc	gyrosetfoc <x_offset> <y_offset> <z_offset>, eg: gyrosetfoc 0x0016 0x00f8 0x0080
gyrogetfoc	gyrogetfoc
gyrosetois	gyrosetois <enable/disable>, eg: gyrosetois 1
gyrogetois	gyrogetois
gyrosetfs	gyrosetfs <enable/disable>, eg: gyrosetfs 1
gyrogetfs	gyrogetfs
gyrosetcrt	gyrosetcrt
gyrogetcrt	gyrogetcrt
gyrosetpwm	gyrosetpwm <power_mode>, eg: gyrosetpwm 2
gyrogetpwm	gyrogetpwm
gyrosettata	gyrosettata <enable/disable>, eg: gyrosettata 1
gyrogettat	gyrogettat
gyrotrignvm	gyrotrignvm
gyrogetnvm	gyrogetnvm

Table 39: Gyroscope Control Parameter Commands Usage

```

gyrosetfoc 0x0016 0x00f8 0x0080
Set the Gyroscope Fast Offset Calibration
  -<x_offset> : 22
  -<y_offset> : 248
  -<z_offset> : 128
gyrogetfoc
Gyroscope Fast Offset Calibration :
  -<x_offset> : 22
  -<y_offset> : 248
  -<z_offset> : 128
gyrosetois 1
Gyroscope OIS Enabled
gyrogetois
Gyroscope OIS Status : Enabled
gyrosetfs 1
Gyroscope Fast Startup Enabled
gyrogetfs
Gyroscope Fast Startup Status : Enabled
gyrosetcrt
Start Gyroscope Component ReTrim (CRT)
gyrogetcrt
Gyroscope CRT Status : Successful
gyrosetpwm 2
Set the Gyroscope Power Mode to LOW POWER
gyrogetpwm
Gyroscope Power Mode : LOW POWER
gyrosettat 1
Gyroscope Timer Auto Trim Started
gyrogettat
Gyroscope Timer Auto Trim Status : Started
gyrotrignvm
Trigger a NVM writing for gyroscope
gyrogetnvm
NVM writing status for gyroscope: Done

```

magsetpwm 0
Set the Magnetometer Power Mode to NORMAL
maggetpwm
Magnetometer Power Mode : NORMAL
```

Figure 40: Magnetometer Control Parameter Commands Output

### 3.13.4 Wrist Wear Wakeup

The following commands allow the user to configure the Wrist Wear Wakeup sensor.

Feature Class	Command	Description
Wrist Wear Wakeup Sensor Control	<code>wwwsetcnfg</code>	Set the Wrist Wear Wakeup Configuration
	<code>wwwgetcnfg</code>	Get the Wrist Wear Wakeup Configuration,

Table 43: Wrist Wear Wakeup Control Parameter Commands Overview

Wrist Wear Wakeup Parameter commands usage -	
Command	Usage
<code>wwwsetcnfg</code>	<code>wwwsetcnfg &lt;maf&gt; &lt;manf&gt; &lt;alr&gt; &lt;all&gt; &lt;apd&gt; &lt;apu&gt; &lt;mdm&gt; &lt;mdq&gt;</code> , eg: <code>wwwsetcnfg 1700 1600 120 100 150 225 5 7</code>
<code>wwwgetcnfg</code>	<code>wwwgetcnfg</code>

Table 44: Wrist Wear Wakeup Control Parameter Commands Usage

```
wwwgetcnfg
min_angle_focus : 1774
min_angle_nonfocus : 1522
angle_landscape_right : 128
angle_landscape_left : 128
angle_portrait_down : 22
angle_portrait_up : 241
min_dur_moved : 2
min_dur_quite : 2

wwwsetcnfg 1700 1600 120 100 150 225 5 7
min_angle_focus : 1700
min_angle_nonfocus : 1600
angle_landscape_right : 120
angle_landscape_left : 100
angle_portrait_down : 150
angle_portrait_up : 225
min_dur_moved : 5
min_dur_quite : 7

wwwgetcnfg
min_angle_focus : 1700
min_angle_nonfocus : 1600
angle_landscape_right : 120
angle_landscape_left : 100
angle_portrait_down : 150
angle_portrait_up : 225
min_dur_moved : 5
min_dur_quite : 7
```

Figure 41: Wrist Wear Wakeup Control Parameter Commands Output

### 3.13.5 AnyMotion/NoMotion

The following commands allow the user to configure the AnyMotion/NoMotion sensor.

Feature Class	Command	Description
---------------	---------	-------------

<b>AnyMotion/NoMotion Sensor Control</b>	<b>amsetcnfg</b>	Set the Any Motion
	<b>amgetcnfg</b>	Get the Any Motion Configuration
	<b>nmsetcnfg</b>	Set the No Motion Configuration
	<b>nmgetcnfg</b>	Get the No Motion Configuration

Table 45: AnyMotion/NoMotion Control Parameter Commands Overview

The AnyMotion and NoMotion sensors share same set of parameters. These include:

Configuration	Description
duration	Defines the number of consecutive data points for which the threshold condition must be respected, for interrupt assertion. It is expressed in 50Hz samples (20ms). Range is 0-163sec
axis selection	Minimum threshold for flick peak on z-axis. Scaling: 0.4883, Range: 0x1F4 to 0x5DC
threshold	Slope threshold value for any-motion/no-motion detection. Range is 0 to 1g.

Table 46: AnyMotion/NoMotion Control Parameters

AnyMotion/NoMotion Parameter commands usage -	
Command	Usage
amsetcnfg	amsetcnfg <duration> <axis> <threshold> eg: amsetcnfg 5 7 170
amgetcnfg	amgetcnfg
nmsetcnfg	nmsetcnfg <duration> <axis> <threshold> eg: nmsetcnfg 1 7 144
nmgetcnfg	nmgetcnfg

Table 47: AnyMotion/NoMotion Control Parameters Usage

```

amgetcnfg
Any Motion Configuration:
  -duration : 16
  -axis_sel : 4
  -threshold : 44

amsetcnfg 5 7 170
Set the Any Motion Configuration
  -duration : 5
  -axis_sel : 7
  -threshold : 170

amgetcnfg
Any Motion Configuration:
  -duration : 5
  -axis_sel : 7
  -threshold : 170

nmgetcnfg
No Motion Configuration:
  -duration : 1
  -axis_sel : 2
  -threshold : 120

nmsetcnfg 1 7 144
Set the No Motion Configuration
  -duration : 1
  -axis_sel : 7
  -threshold : 144

```

Figure 42: AnyMotion/NoMotion Control Parameter Commands Output

### 3.13.6 Wrist Gesture Detector

The following commands allow the user to configure the Wrist Gesture Detector sensor.

Feature Class	Command	Description
---------------	---------	-------------

<b>Wrist Gesture Detector Sensor Control</b>	<b>wgdsetcnfg</b>	Set the Wrist Gesture Detector Configuration
	<b>wgdgetcnfg</b>	Get the Wrist Gesture Detector Configuration

Table 48: Wrist Gesture Detector Control Parameter Commands Overview

<b>Wrist Gesture Detector Parameter commands usage -</b>	
<b>Command</b>	<b>Usage</b>
<b>wgdsetcnfg</b>	wgdsetcnfg <mfp_y_th> <mfp_z_th> <gx_pos> <gx_neg> <gy_neg> <gz_neg> <fpdc> <lmfc> <mdjp> <dp0>, eg: wgdsetcnfg 0x400 0x200 0x600 0xf000 0xa000 0x900 0x4000 0x6000 0xb 1
<b>wgdgetcnfg</b>	wgdgetcnfg

### 3.13.9 Physical Range

The following commands allow the user to set the physical range of each sensor.

Feature Class	Command	Description
Physical Range Configuration	<i>phyrangeconf</i>	Set the range of physical sensor

Table 54: Physical Range Configuration Commands Overview

Physical Range Configuration commands usage -	
Command	Usage
<i>phyrangeconf</i>	<i>phyrangeconf &lt;sensor_id&gt; &lt;range_value&gt;</i> eg: <i>phyrangeconf 1 0x10</i>

Table 55: Physical Range Configuration Commands Usage

```

phyrangeconf 1 0x10
Setting the range of sensor successfully

```

Figure 46: Physical Range Configuration Commands Output

### 3.13.10 Fast Offset Compensation

The following commands allow the user to enable the fast offset compensation for the sensor.

Feature Class	Command	Description
---------------	---------	-------------

<b>Fast Offset Compensation</b>	<b>foc</b>	Enable the fast offset compensation for the sensor
---------------------------------	------------	--

Table 56: Fast Offset Compensation Commands Overview

Fast Offset Compensation commands usage -	
Command	Usage
foc	foc <sensor id ('1' for accelerometer, '3' for gyroscope)> eg: foc 1

Table 57: Fast Offset Compensation Commands Usage

```
foc 1
Keep the sensor stable for accel foc
FOC Success
```

Figure 47: Fast Offset Compensation Commands Output

### 3.14 Activity Recognition Parameters Commands

The following commands allow the host to set or get Activity Recognition parameters.

Feature Class	Command	Description
<b>Activity Recognition Parameters</b>	<b>sethearactvcnfg</b>	Set the Hearable Activity Configuration
	<b>gethearactvcnfg</b>	Get the Hearable Activity Configuration
	<b>setwearactvcnfg</b>	Set the Wearable Activity Configuration
	<b>getwearactvcnfg</b>	Get the Wearable Activity Configuration

Table 58: Activity Recognition Parameters Commands Overview

Activity Recognition Parameters commands usage -	
Command	Usage
sethearactvcnfg	sethearactvcnfg <ss> <ppe> <mingt> <maxgt> <obs> <msmc> eg. sethearactvcnfg 1 1 1 1 1 1
gethearactvcnfg	gethearactvcnfg
setwearactvcnfg	setwearactvcnfg <ppe> <mingt> <maxgt> <obs> <msmc> eg. setwearactvcnfg 1 1 1 1 1
getwearactvcnfg	getwearactvcnfg

Table 59: Activity Recognition Parameters Commands Usage

```
sethearactvcnfg 1 1 1 1 1 1
Set hearable activity configuration
- seg_size: 1
- post_process_en: 1
- min_gdi_thre: 1
- max_gdi_thre: 1
- out_buff_size: 1
- min_seg_moder_cfg: 1
gethearactvcnfg
Hearable activity configuration:

- post_process_en: 1
- min_gdi_thre: 1
- max_gdi_thre: 1
- out_buff_size: 1
- min_seg_moder_cfg: 1
setwearactvcnfg 1 1 1 1 1
Set wearable activity configuration
- post_process_en: 1
- min_gdi_thre: 1
- max_gdi_thre: 1
- out_buff_size: 1
- min_seg_moder_cfg: 1
getwearactvcnfg
Wearable activity configuration:
- post_process_en: 1
- min_gdi_thre: 1
- max_gdi_thre: 1
- out_buff_size: 1
- min_seg_moder_cfg: 1
```

Figure 48: Activity Recognition Parameters Commands Output

3.15 Data Injection Commands

The following commands allow the host to set or inject data.

Feature Class	Command	Description
Data Injection	dmode	Switch to Data Injection mode
	dinject	Compute virtual sensor output from raw IMU data

Table 60: Data Injection Commands Overview

Data Injection commands usage -	
Command	Usage
dmode	dmode <mode> eg. dmode s
dinject	dinject <input_file.txt> eg. dinject field_log.txt

Figure 50: Diagnostics Command Output

### 3.17 Utility Commands

The utility commands are application specific commands and allow the users to control and manage the various application specific configurations to have an enhanced user interaction.

Feature Class	Utility	Command	Description
Utility	Debug	-v OR verb	Set the verbose level.
	Status	echo	Enable/Disable echo
		heart	Enable/disable Heartbeat Message
	File	mklog	Create a log file
		rm	Remove a log file
		ls	List the files in the external Flash
		wrfile	Write to a log file
		rdfile	Read from a log file
		slabel	Set a string label in the log file
	Stream	strbuf	Set the streaming buffer size
	UI	cls	Clear Screen

Table 64: Utility Commands Overview

**Note:** Except the 'verb' command, all other utility commands are exclusive to MCU mode.

### 3.17.1 Debug Utility

The verbose command '-v' or 'verb' sets the verbose level. The verbose level refers to the level of response that the user expects from the application regarding its state of execution. The verbose level is classified in Table 61.

verbose	scope
0	Give only error notifications.
1	Give notifications regarding errors as well as warnings.
2	Give notifications regarding the complete state of the system in terms of errors, warnings, and information about the current state of execution.

Table 65: Verbose Levels

Debug Utility -	
Command	Usage
verb	verb <verbose_level>, eg: verb 1

Table 66: Verbose Command Usage

```

version
HW info:: Board: 9, HW ID: 11, Shuttle ID: 199, SW ID: 10
SW Version: 0.4.9
Build date: Oct 22 2024

verb 2
[I]Executing verb 2
Setting verbose to 2

version
[I]Executing version
HW info:: Board: 9, HW ID: 11, Shuttle ID: 199, SW ID: 10
SW Version: 0.4.9
Build date: Oct 22 2024

```

Figure 51: Debug Utility Commands Output

By default, the verbose level is set to 0 to limit the number of notifications to need-to-know. The verbose level can be configured accordingly based on debugging and application requirements.

### 3.17.2 Status Utility

The echo command echoes back the input given to the application. The echo command can be used to enable/disable the echo feature.

The 'heart' command is used to indicate the system notifications to the user by blinking the LED every time a notification is sent. The heart command can be used to enable/disable the heartbeat feature:

Status Utility -	
Command	Usage
echo	echo <state>, eg: echo on
heart	heart <state>, eg: heart off

Table 67: Status Utility Commands Usage

```

echo off
Setting echo to off

Setting echo to on

heart on
Setting Heartbeat message to on

[H]34807
[H]34857
[H]37307
[H]37357
[H]39807
[H]39857

[H]42307
[H]42357
heart off
Setting Heartbeat message to off

```

Figure 52: Status Utility Commands Output

### 3.17.3 File Utility

The File utility commands allow the user to handle the various File and Log operations such as create/delete file, read/write file, add annotations etc. The file utility commands are different from the logging commands described in section 3.7, in the sense that the log commands are more oriented towards logging the sensor data, whereas the File utility commands are more oriented towards facilitating the user with file management of the external Flash on the application board.

Table 64 describes the commands:

File Utility -	
Action	Commands
Generate the log file	mklog <file_name.file_extension>, eg: mklog abc.txt
List the files in the external Flash of the application board	ls
Write to the log file	wrfile <file_name.file_extension> <length_in_bytes>, eg: wrfile abc.txt 150 <b>Note 1:</b> In an event, a file is not present with the passed filename, a new file with same filename is generated. <b>Note 2:</b> There is a input timeout duration of 10s. After executing the 'wrfile' command, if no input is provided within the 10s, the application will assert the 'wrfile' callback and return 'Write Timed Out' error. <b>Note 3:</b> If the same command executed second time. The new input data will be appended to the previous content of the file. <b>Note 4:</b> While uploading the data from a PC using any application, ensure that <size_of_file> is passed as the input to length argument, and not the <size_of_file_on_disk>
Read the log file	rdfile <file_name.file_extension>, eg: rdfile abc.txt
Delete the File	rm <file_name.file_extension>, eg: rm abc.txt
Annotate the log file	slabel <label string>, eg: slabel Activity_N <b>Note:</b> slabel command can be used in association with Log generation commands, when acquiring the data in logging mode to annotate the events.

Table 68: File Utility Commands Usage

### 3.17.3.1 File Handling

```
ls
                                README.TXT | 731 B

mklog ab.txt
File ab.txt was created

ls
                                README.TXT | 731 B
                                ab.txt | 0 B

wfile abc.txt 10
Waiting for 10 bytes of data
File Transferred : 100.00%
Write Completed

rdfile abc.txt
Read Initiated
abcdef0123
Read Completed

rm ab.txt
File ab.txt was removed

ls
                                README.TXT | 731 B
                                abc.txt | 10 B
```

Figure 53: File Utility Commands Output

### 3.17.3.2 Annotation

Annotation is very useful from a data collection perspective. It is used to annotate the various events covered during the scope of data collection.

File Annotation	
Action	Usage
Attach a log file for the logging	attlog <file_name.file_extension>, eg: attlog abc.bin
Enable the sensor acquisition in logging mode	logse <id>:<odr>, eg: logse 4:100
Annotate the log file	slabel <label string>, eg: slabel Activity_N
Disable the sensor acquisition	logse <id>:0, eg: logse 4:0
Detach log file from logging	detlog <file_name.file_extension>, eg: detlog abc.bin

Table 69: File Annotation using 'slabel'

### 3.17.4 Stream Utility

The 'strbuf' command allows the user to configure the streaming packet length. This is a performance improvement feature. At higher ODRs, due to limited BLE packet size, there is a sample loss due to high frequency of notifications. In such a scenario, to ensure that there is no loss of data, the samples are maintained in a local FIFO and sent packet by packet. The 'strbuf' command is used to configure the length of this local FIFO.

Stream Utility -	
Command	Usage
strbuf	strbuf <buffer_size>, eg: strbuf 100 <b>Note:</b> The maximum buffer size is 240

Table 70: 'strbuf' Command Usage

The utility of 'strbuf' command is difficult to showcase in the scope of this document. However, the following steps can be followed to understand the utility of 'strbuf' command.

<b>'strbuf' Utility</b>	
<b>Action</b>	<b>Usage</b>
Enable Sensor Acquisition	actse <sensor_id>:<odr>, eg: actse 1:200
Disable Sensor Acquisition	actse <sensor_id>:0, eg: actse 1:0
Performance Analysis	Copy the data and compute time difference
Configure the Stream Buffer Length	strbuf <buffer_size>, eg: strbuf 100
Enable Sensor Acquisition	actse <sensor_id>:<odr>, eg: actse 1:200
Disable Sensor Acquisition	actse <sensor_id>:0, eg: actse 1:0
Performance Analysis	Copy the data and compute time difference

**Table 71: 'strbuf' Utility**

### 3.17.5 UI Utility

The 'cls' is a UI command and used to clear the screen of the UI.

<b>Debug Utility</b>	
<b>Command</b>	<b>Usage</b>
cls	cls

**Table 72: 'cls' Command Usage**

## 4 BHyCLI Limitations

### 4.1 HW Limitations

- There is a limitation on the file name length when transferring files to APP30 External Flash in MTP mode. It allows a maximum of 39 characters for file names.

### 4.2 Platform Limitations

- Copying of the log files using Windows Explorer can lead to data corruption:  
<https://bcds02.de.bosch.com/jira/browse/SOLTEAM-1255>.
- For Head Orientation sensors, the ODR change is not reflected for subsequent sensor activation with different ODRs.
- Sometimes, firmware files with large file name lengths can't be copied to external Flash. To address this, shorten the file name.
- Due to filesystem constraints, it does not support the simultaneous writing of multiple files to the external memory of application boards.
- In MCU mode, a file will be overwritten instead of removed and/or created as a new one for all commands (except 'rm' and 'getbsxparam') with handling file.
- HEX streaming only supports ODR with a frequency not bigger than 400Hz.

## 5 Legal Disclaimer

### 5.1 Engineering Samples

Engineering Samples are marked with an asterisk (\*) Or (e). Samples may vary from the valid technical specifications of the product series contained in the user guide. They are therefore not intended or fit for resale to third parties or for use in end products. Their sole purpose is internal client testing. The testing of an engineering sample may in no way replace the testing of a product series. Bosch Sensortec assumes no liability for the use of engineering samples. The Purchaser shall indemnify Bosch Sensortec from all claims arising from the use of engineering samples.

### 5.2 Product Use

Bosch Sensortec products are developed for the consumer goods industry. They are not designed or approved for use in military applications, life-support appliances, safety-critical automotive applications and devices or systems where malfunctions of these products can reasonably be expected to result in personal injury. They may only be used within the parameters of this user guide.

The resale and/or use of products are at the Purchaser's own risk and the Purchaser's own responsibility.

The Purchaser shall indemnify Bosch Sensortec from all third party claims arising from any product use not covered by the parameters of this user guide or not approved by Bosch Sensortec and reimburse Bosch Sensortec for all costs in connection with such claims.

The Purchaser accepts the responsibility to monitor the market for the purchased products, particularly with regard to product safety, and inform Bosch Sensortec without delay of any security relevant incidents.

### 5.3 Application examples and hints

With respect to any examples or hints given herein, any typical values stated herein and/or any information regarding the application of the device, Bosch Sensortec hereby disclaims any and all warranties and liabilities of any kind, including without limitation warranties of non-infringement of intellectual property rights or copyrights of any third party. The information given in this document shall in no event be regarded as a guarantee of conditions or characteristics. They are provided for illustrative purposes only and no evaluation regarding infringement of intellectual property rights or copyrights or regarding functionality, performance or error has been made.
